---

Hose Clamp

## Variants

5-235

## Details

### Product Description:

Hose Clamp – Secure and Reliable Hose Fastening Solution

A hose clamp is a device used to attach and seal a hose onto a fitting such as a barb or nipple. It ensures a tight seal between the hose and the fitting, preventing fluid leaks and maintaining system integrity

### Key Features:

- **Material:** Typically made from stainless steel, offering excellent corrosion resistance and durability.?
- **Design:** Features a band and screw mechanism (commonly a worm gear) that tightens the clamp around the hose, providing a secure grip.?
- **Adjustability:** The screw mechanism allows for precise adjustment, accommodating various hose sizes.?

## Specifications:

- Sizes: Available in a range of diameters to fit different hose sizes.?
- Types: Various types include worm gear clamps, spring clamps, and wire clamps, each suited for specific applications.?

Ensure proper selection of clamp type and size based on the specific requirements of your application to achieve optimal performance and safety.
