Details

Comway Stripper CS-02-B

The Comway Stripper CS-02-B is designed for accurate and safe stripping of fiber optic cables during installation, termination, and maintenance work. It helps remove cable layers efficiently without damaging the delicate optical fibers inside.

Product Features

Feature	Description
Stripping Function	Removes outer jacket, strength members, and buffer or coating layers of fiber optic cable.
Precision	Designed for accurate stripping to avoid fiber damage and maintain signal quality.
Adjustable Design	May include adjustable blades or settings for different cable diameters and materials.
Ergonomic Grip	Comfortable handle design for easy use during cable preparation work.
Safety	May include blade guards or locking mechanisms for safer operation.
Additional Functions	Some versions may also support cutting or crimping, depending on the model.

Applications

Application	Details
Telecommunications	Used for fiber optic cable preparation in telecom networks.
Data Networking	Suitable for installation and maintenance of fiber network systems.
Fusion Splicing	Helps prepare fibers before splicing.
Termination	Useful for connectorization and cable termination processes.

Compatibility

The CS-02-B model may be part of the Comway stripper product series, indicating possible variations or upgraded versions for different user requirements.
