2MM 1MM

Details

The **Clip Wire 2mm (Bending Wire)** is a versatile and durable metal wire designed for use in fiber optic cable installations, electrical work, and general-purpose fastening tasks. With a precise 2mm diameter, this wire offers an ideal balance of strength and flexibility, making it perfect for securing and supporting cables, conduits, or other components in structured cabling systems.

Key Features:

- 1. High-Quality Material:**
Manufactured from corrosion-resistant galvanized steel or stainless steel, ensuring long-term durability in both indoor and outdoor environments.
- 2. Ideal Thickness:**
The 2mm gauge provides excellent rigidity while still being pliable enough for manual or tool-assisted bending and shaping.

3. Flexible Application:

Commonly used in fiber optic installations to secure aerial or drop cables, especially in conjunction with hooks, brackets, or suspension clamps.

4. Easy to Work With:

Smooth surface finish and consistent thickness allow for easy handling, cutting, and bending without sharp edges or cracking.

5. Reliable Holding Strength:

Maintains its form once bent or twisted, ensuring a secure and stable hold for cable management tasks.

Applications:

1. Fiber optic and telecommunication cable installation
2. Fastening and bundling drop wires or patch cords
3. Use in overhead cable setups with hooks or wall clamps
4. Electrical wiring, fencing, or general fastening applications
