## Face Plate ONU XPON HSGQ

### **Variants**

855 853

### **Details**

#### **Face Plate ONU XPON HSGQ-853:**

The Face Plate ONU XPON HSGQ-853 is a smart solution for neatly terminating fiber lines in GPON / XGPON deployments. Once the incoming drop cable reaches the wall, the installer can feed it into the faceplate, splice it to the short pigtail, and secure it inside the enclosure. Then, the ONU connects with a short patch cord (or pigtail), keeping everything tidy and secure.

This design helps avoid exposed fiber loops or messy wiring, giving a more professional finish to your FTTH installation. It's ideal for residential or small business environments where fiber termination points must be both functional and discreet.

#### **Product Parameter:**

86mm X 86mm panel ONU

wall or desk desktop, elegant and space-saving.

\*11000M adaptive electrical port+1 voice port

Support EPON/GPON mode and automatic switching mode

\*Support HGU&SFU two morphological modes

"the transmission distance can reach 20KM
