# Optical Fiber Cable Jacket Cutter Tool

The **Optical Fiber Cable Jacket Cutter** is a professional fiber optic hand tool used to cut and remove the **outer PE jacket** of optical fiber cables safely and efficiently during fiber installation and maintenance work.

This tool is highly important for **fiber optic technicians, ISP engineers, telecom installers, and FTTH installation teams** because it helps prepare fiber cables accurately without damaging the inner fibers or strength members.

## Key Features

| |
|---|
| Used for cutting optical fiber cable PE jacket |
| Helps protect inner optical fibers during cable preparation |
| High-quality and durable cutting blade |
| Comfortable grip for easy field operation |
| Suitable for FTTH and fiber optic installation work |
| Compact and lightweight design |
| Fast and accurate cable jacket removal |

| |
|---|
| Essential tool for fiber optic technicians |

## Applications

| |
|---|
| FTTH Fiber Installation |
| Optical Fiber Cable Preparation |
| Telecom Fiber Network Maintenance |
| ISP Fiber Deployment Projects |
| Fiber Splicing and Termination Work |
| Outdoor and Indoor Fiber Cable Installation |

**Note:** Always use high-quality fiber optic tools to avoid damaging optical fibers and to maintain proper installation quality and low splice loss.
