

# Cleaver Blade of DT-10

---

Cleaver Blade of DT-10

## Variants

16 Channel

## Details

**The Cleaver Blade of DT-10 is a precision replacement blade designed for use with the DT-10 series fiber optic cleaver, an essential tool in fiber optic cable preparation. This blade enables technicians to achieve clean, accurate cleaves on optical fibers, which is crucial for low-loss splicing and reliable network performance. High-quality construction ensures consistent cutting performance across repeated use, supporting efficient preparation of fiber ends for fusion splicing, connector termination, or testing workflows. The blade is offered in various channel configurations (e.g., 16 channel) to match different cleaver models and fiber types, and can be easily installed to maintain optimal cleaver performance over time.**
