LED Cable of Fujikura Series

## Variants

88/66S 22S 80S 62 Series

## Details

The **LED Cable of Fujikura Series** is an accessory part designed for use with various Fujikura fusion splicers, helping to connect and power the indicator LEDs or display components on the splicer unit. It is compatible with multiple Fujikura models including **80S**, **88/66S**, **22S**, and **62 Series**, enabling proper functioning of the LED indicators that inform operators about machine status and alerts during splicing operations. This cable is essential when replacing damaged or worn LED connections to restore visual feedback and diagnostic lights on the splicer's control panel.
