Details

UPB Bracket

The UPB bracket is manufactured from aluminum alloy with high mechanical strength. Its unique patented design provides a universal fitting suitable for installation on wooden, metal, or concrete poles.

Technical Characteristics

Parameter	Specification
Material	Aluminum Alloy
Working Load	5000 N
Weight	0.2 kg

Installation

With Steel Bands	Installed on any type of pole (wood, metal, concrete) using two 20×0.7 mm stainless steel bands (YR3470) and two buckles (YRB34). Typically, two bands of one meter each are required per bracket.

With Bolts	If the pole is drilled (wooden or concrete), the bracket can be secured using a 14 mm or 16 mm bolt. The bolt length should be at least equal to the pole diameter + 50 mm (bracket thickness).
